

ASTS® BARCODE FONTS

Should be installed on a client's (end ASTS user) PC.

Below are the instructions to install the ASTS® barcode fonts. Note: Your network Administrator has to be logged in on your PC to perform this action (you cannot perform this action).

1. The barcode fonts can be downloaded from GRA's web site at <http://www.astsinventory.com/customer-downloads/>
2. I recommend that he/she create a temp folder on your desktop first, then extract from the zip file the 8 font files into the temp folder.
3. Then they can simply copy the 8 files from the temp folder and paste them into the C:/Windows/Fonts folder.

4. To test to see if successful. Open a Word document and look at the Fonts drop down menu. If the fonts were successfully saved then you will see 8 new fonts and all of them will start with the name of "Code39".
